

Project: Retail Sales Performance Analysis Dashboard

Tool: Microsoft Excel

Analyst: Oluwatosin Hamzat

Project Overview

This project analyzes retail sales data using Microsoft Excel and presents key business metrics through an interactive dashboard. The goal was to transform raw sales data into actionable insights that support data-driven decision-making.

Dashboard Preview

(Add dashboard screenshot here)

Objectives

- Clean and prepare retail sales data
- Analyze sales performance across products and categories
- Track key business KPIs
- Identify top-performing products and customers
- Evaluate promotional campaign effectiveness
- Create an interactive dashboard for business users

Tools & Techniques

- Microsoft Excel
- Data Cleaning
- Pivot Tables
- Pivot Charts
- Slicers
- KPI Cards
- Dashboard Design

Dataset Information

The dataset contains:

- Order ID
- Order Date
- Customer Name
- Category
- Product Name
- Quantity
- Unit Price
- Promo Code
- Revenue
- Year
- Month

Key Performance Indicators (KPIs)

KPI	Value
Total Revenue	£482,887.04
Total Orders	911
Total Quantity Sold	2,058
Total Customers	911
Best Selling Product	Laptop
Best Selling Category	Electronics

Dashboard Features

Revenue Overview

Tracks monthly revenue trends across multiple years.

Category Performance

Analyzes revenue contribution by product category.

Promo Code Analysis

Measures the impact of promotional campaigns on sales.

Top Products

Identifies products generating the highest revenue.

Top Customers

Highlights the highest-value customers.

Interactive Filtering

Users can filter the dashboard by:

- Category
- Promo Code
- Year
- Month

Key Insights

- Electronics generated the highest revenue among all categories.
- Laptop and Smartphone sales were the primary revenue drivers.
- Premium products contributed a significant share of overall revenue.
- Office Supplies recorded frequent transactions but lower revenue contribution.
- Promotional campaigns positively influenced customer purchasing behavior.
- Revenue was concentrated among a small number of high-value products.

Conclusion

This project demonstrates practical skills in Excel-based data analysis, dashboard development, KPI reporting, and business intelligence. It highlights the ability to convert raw data into meaningful insights that support strategic decision-making.
